Normal and Pathological Development of Neural Crest Derivatives

Lectures in Biomedical and Biomolecular Sciences

A Presentation by Lionel Larue,
Research Director, Institut Curie, France

Dr. Larue’s research focuses on the molecular and cellular mechanisms that underlie the generation of melanoma, the deadliest form of skin cancer. He utilizes information gained from studies on the development of pigment cells, the melanocytes, to uncover new avenues for the treatment of melanoma. Dr. Larue received his Ph.D. at IGR, Villejuif, France. He was a post-doctoral fellow at the Fox Chase Cancer Center, Philadelphia and a research scientist at the Max Planck Institute for Immunobiology in Germany.

Tuesday, Nov. 8
10 a.m.
Wertheim Conservatory
Room 130

Seating is limited.
Please RSVP to jayanes@fiu.edu.

The presentation is co-sponsored by the Biology Graduate Student Association
