

Science Communication Forum

The Patricia and Phillip Frost Museum of Science & FIU Partnership

There is a call for new models in science learning and communication, one that provides a bridge between formal and informal settings, and connects people at all levels with opportunities for learning.

The Patricia and Phillip Frost Museum of Science (FMOS) and Florida International University have partnered to address this call. The partnership offers a reciprocal arrangement to support science education, engagement and communication, with primary emphasis on marine and environmental science.

We invite all faculty, staff and interested students to come learn more about opportunities being developed. This forum will provide a platform to discuss ways to expand collaboration and become involved in training the next generation of STEM professionals to enhance public interest in, and understanding of, science through the art of communication.
